**Re: December 2020 - Effluent Monitoring Report PE-01138**

Dear Sirs:

The Mackenzie Pulp Mill Corporation is under curtailment since July 14, 2020. Our last day of production was July 13, 2020. All the equipment has been nonoperational, and the effluent treatment system has been closed/hibernated on October 29, 2020.

There is no more effluent discharge to the receiving environment from our mill since October 23, 2020; therefore, sampling and analysis required under section 4.1 are not being performed after October 29, 2020.

Please note that, quarterly APE samples were not collected due to absence of flow and frozen pond conditions in the later months of 2020.

Sincerely,

**Khushbu Vandara**  
Environmental Coordinator
