Subject: Watershed update: August 1

Good day,

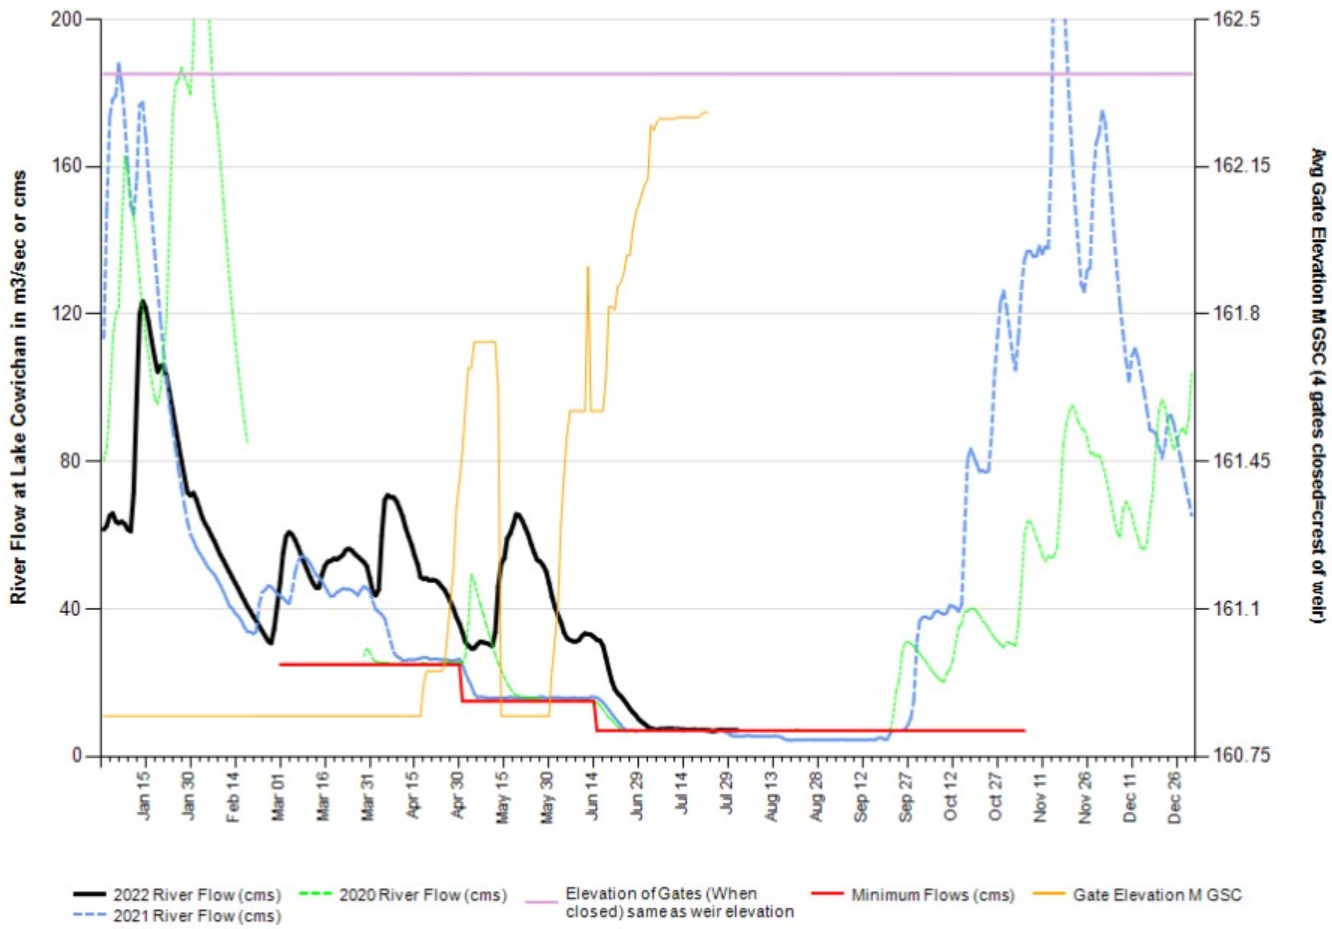

Dry hot weather is finally here and possibly even a few complaints about the heat have been heard by some of you. Conditions in the watershed remain nearly ideal with lake remaining almost 100% full as we begin the gradual decline in lake level. This email only contains lake and river trends and our 7 day weather forecast given we are no longer dealing with melting snow pack and reductions to flow from lake are not called for. We are at risk of needing to increase flow from lake in the coming 2 weeks given how high lake level is currently. Dry hot weather continues with a break from the heat this coming few days and then hot weather again this coming weekend.

Regards,
Brian Houle
