Subject: Watershed Update: July 31, 2024

Good afternoon,

Conditions continue to be very good in the Cowichan Watershed.

Unusual and unexpected wet weather recently has not caused lake level to rise, but rate of decline did decrease and that is helpful.

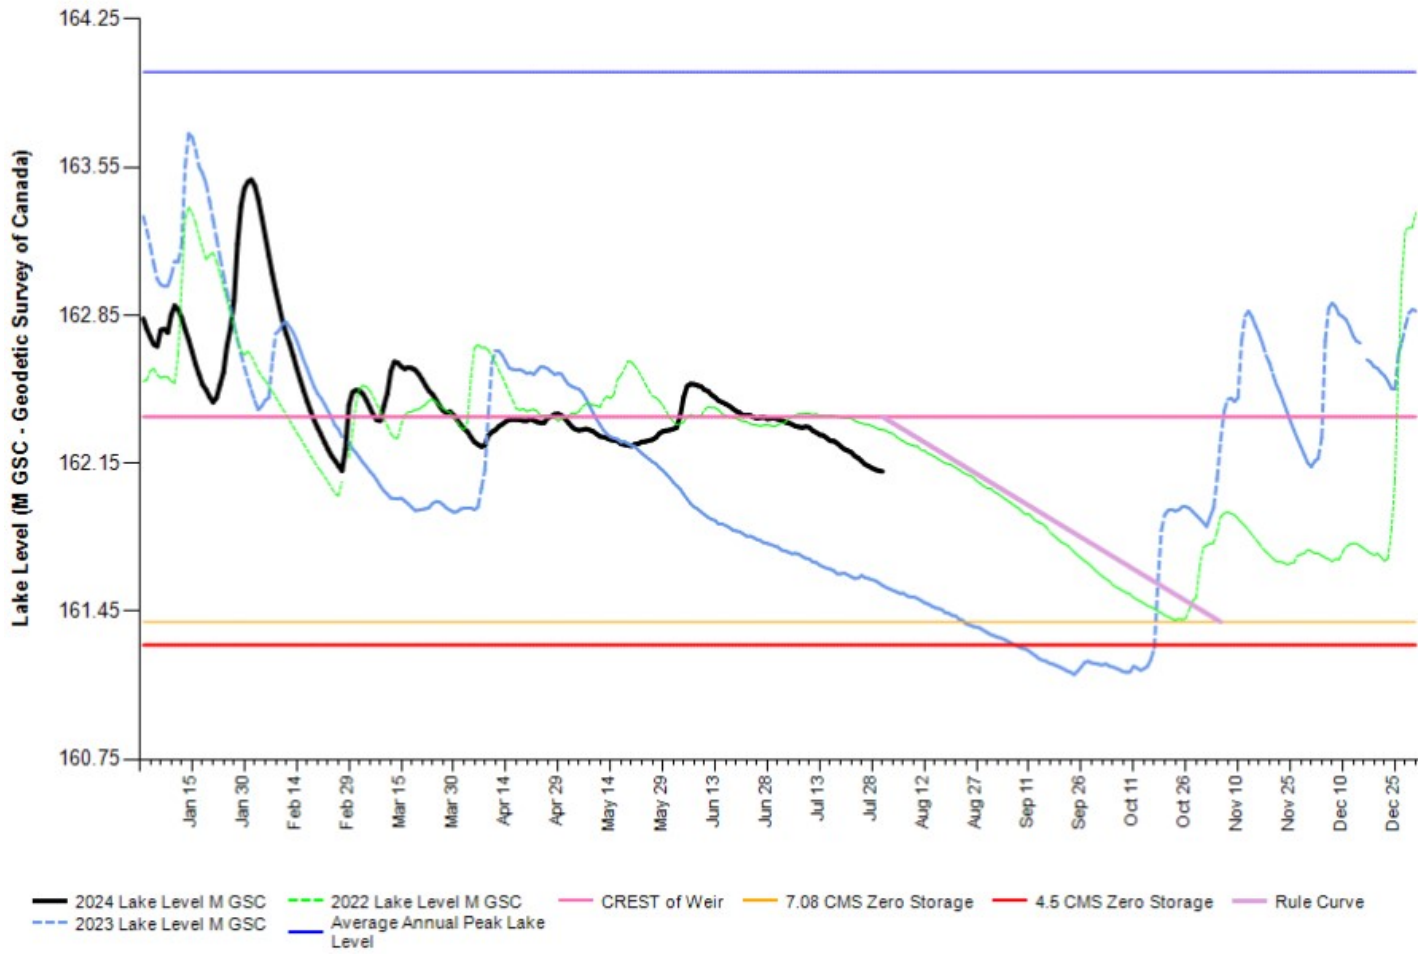

More importantly, the dry ground surface conditions were wetted given the rainfall was at times substantial.

Flow in river will be controlled at 7.08 cms through August and hoping enough water to sustain this flow until return of fall rainfall.

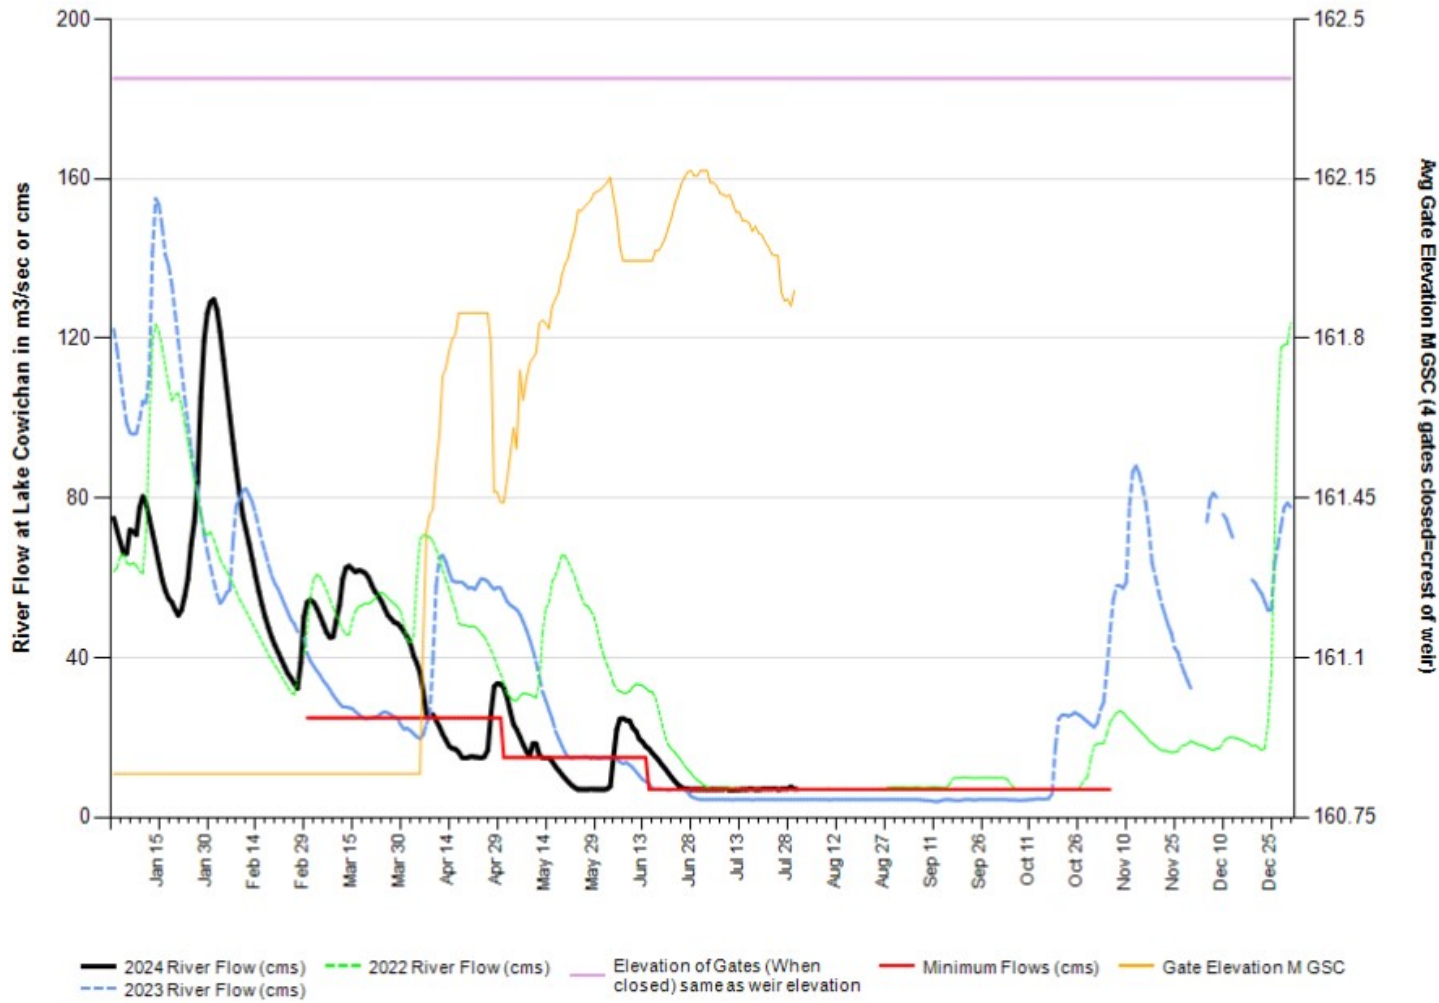

Trends updated and including the flow guide chart where we are guided to keep flow at 7.08 cms.

Regards,
Brian
